Assurance for PMO Professionals

Effective and timely assurance is increasingly seen as critical to the success of projects. Carrying out the right reviews at the right time can help keep a project on course − or get it stopped if it's going wrong! But assurance is much more than just reviews; it's about everything that happens in and around a project to ensure risks are properly managed and that good decisions are made. This course describes how you as a PMO professional fit into the project assurance landscape, and how you can help ensure that project assurance is effective and efficient.

Why should you take the course?

01 Learn how to ensure the principles of good assurance are met in all assurance activity, including establishing and maintaining effective independence.

02 Explore different types of project reviews and how to conduct them in an effective and consistent way.

03 Using case studies, discover how to provide assurance that avoids duplications and omissions, and provides confidence to all stakeholders cost effectively and at the right time.

04 Learn how to advise on the design and implementation of effective P3 assurance arrangements.

Duration: 2 day
Prices via the Website
Virtual Classroom or In-house

A great course for any level of practitioner

A great addition to our training portfolio for PMO Managers and PMO Analysts.

Who is it for?

01 PMO Managers with a current or future responsibility for providing and advising on assurance on projects.

02 PMO staff responsible for assuring projects through monitoring, health checks, reviews and audits.
